The DiY Programme — Workout Plan

General Guidelines

- Start with **3–5 min of low-intensity activity** & take 2–3 warm-up sets of your first exercise with 50–60% load, gradually increasing to your working set.
- Choose a **very light load in Week 1**, log it in the Log Sheet, and progress according to your log sheet from next week.
- If you feel great on some days, you can **increase the number of sets**; if you have less time or feel low, decrease sets and perform exercises in supersets or circuits.
- On days you **do not feel like going for heavy load**, go for lighter load and train till failure.
- You can use **Drop Sets, Rest-Pause Sets, and Back-off Sets** to increase intensity and generate resistance.

Terminology

Term	Definition
Top Set	The set performed using the heaviest load in an exercise.
Back-off Set	Set(s) performed after the top set using lesser loads than the top set.
Tempo Set	A set with defined time of concentric, pause, and eccentric phases. E.g., a 3-1-1 squat = 3 sec going down, 1 sec pause at depth, 1 sec coming up.
Drop Set	2 consecutive sets of the same exercise — heavier load first, then lower weight by 20–40% with no rest in between.
Rest-Pause Set	2 sets of the same exercise consecutively using the same load with 10–30 second rest in between.
